Pre-Consumer Materials refer to materials generated in manufacturing and converting processes such as manufacturing process scrap and trimmings/cuttings. Also, print overruns, overissue publications, and obsolete inventories that did not leave the generating facility would be classified as pre-consumer materials. **These materials should not be included in the above totals.**

Post-Consumer Materials refer to recovered materials that have been used as a consumer item and are diverted from municipal solid waste for the purpose of collection and recycling. The term excludes materials from industrial processes that have not reached the consumer, such as overissues of newspapers or magazines and industrial process scrap.
